#### INTRODUCTION

Section 2 handles one of the most important aspects of preserving a good woodworking installation. Storage, jobsite conditions and relative humidity requirements before, during and after installation are covered here.

Quality assurance can be achieved by adherence to these standards and will provide the owner a quality product at competitive pricing. Working with an AWMAC Member (in Canada) or a WI Certified Millwork Professional (CMP) (in the USA) and the WI Accredited Millwork Company (AMC) they represent to provide your woodwork will help ensure the understanding and performance of the quality level required. Illustrations in this Section are not intended to be all inclusive, other engineered solutions may be acceptable. In the absence of specifications; methods of fabrication are the manufacturer's choice. The design professional, by specifying compliance to these standards increases the probability of receiving the product quality expected.

#### **ADVISORY**

42

DIMENSIONAL CHANGE prevention can be a problem in architectural woodwork products because of uncontrolled relative humidity. This is further intended as a reminder of the natural dimensional properties of

wood and wood-based products such as plywood, particleboard, and high pressure decorative laminate (HPDL) and of the routine and necessary care and responsibilities which must be assumed by those involved.

For centuries, wood has served as a successful material for architectural woodwork, and as history has shown wood products perform with complete satisfaction when correctly designed and used. Problems directly or indirectly attributed to dimensional change of the wood are usually, in fact, the result of faulty design, or improper humidity conditions during site storage, installation, or use. Wood is a hygroscopic material, and under normal use and conditions all wood products contain some moisture. Wood readily exchanges this molecular moisture with the water vapor in the surrounding atmosphere according to the existing relative humidity. In high humidity, wood picks up moisture and swells. In low humidity, wood releases moisture and shrinks.

As normal minor fluctuations in humidity occur, the resulting dimensional response in properly designed construction will be insignificant. To reduce humidity related problems, the appropriate recommendations from Section 2 should be considered. Uncontrolled extremes can likely cause problems.

Together with proper design, fabrication, and installation, humidity control is obviously the important factor in preventing dimensional change problems.

Architectural woodwork products are manufactured as designed from wood that has been kiln dried to an appropriate average moisture content. Subsequent dimensional change in wood is and always has been an inherent natural property of wood. These subsequent changes are not necessarily the responsibility of the manufacturer. Specifically, responsibility for dimensional change problems in wood products resulting from:

- Design rests with the designer/architect/ specifier.
- Improper relative humidity exposure during site storage and installation rests with the general contractor.
- **Humidity extremes** after occupancy rests with engineering and maintenance.

#### RECOMMENDATIONS

CLIMATE CONTROL
 MAINTENANCE of relative

 $\label{eq:maintenance} \begin{array}{l} \textbf{MAINTENANCE} \text{ of relative humidity} \\ \text{every hour of every day, within the} \end{array}$ 

ranges shown previously in this section is important. Uncontrolled extremes such as those listed below will likely cause problems:

- Relative humidity, above or below the ranges shown previously in this section.
- Sudden changes in the allowable relative humidity, especially when it is repetitive.

#### SPECIFICATION CONSIDERATIONS

- HVAC not maintained during hours of nonoccupancy or on weekends.
- Windows and doors intended to be open during occupancy.

#### CARE

All construction related products, regardless of material, have particular care and storage requirements. Woodwork is not unique in this respect.

Architectural woodwork should be treated like fine furniture, particularly that which is constructed of wood finished with a transparent finish system. Modern commercial finishes are durable and resistant to moisture.

 Finish Maintenance - With the exception of true oil-rubbed surfaces, modern finishes do not need to be polished, oiled, or waxed. In fact, applying some polishing oils, cleaning waxes, or products containing silicone may impede the effectiveness of touch-up or refinishing procedures in the future.

Remove oil or grease deposits with a mild flax soap, following the directions for dilution on the container.

#### CARE (continued)

No abrasives, chemical or ammonia cleaners should be used to clean woodwork surfaces. Routine cleaning is best accomplished with a soft, lint-free cloth lightly dampened with water or an inert household dust attractant. Allowing airborne dust, which is somewhat abrasive, to build up will tend to dull a finish over time.

- Impact Avoid excessive or repetitive impact, however lightly applied. The cellular structure of the wood will compact under pressure. Many modern finishes are flexible, and will show evidence of impact and pressure applied to them.
- Heat Avoid localized high heat, such as a hot pan or plate, or a hot light source, close to or in contact with the finished surface.
- Photodegradation Avoid exposure to direct sunlight as this may alter the appearance of woodwork over time.
- **Humidity** Maintain the relative humidity around the woodwork in accordance with the guidelines published in these standards, every hour of every day, to minimize wood movement.
- Moisture Architectural woodwork, when properly finished, is relatively durable and resistant to moisture. Prevent direct contact with moisture, and wipe it dry immediately should any occur. Allowing moisture to accumulate on, or stay in contact with, any wood surface, no matter how well finished, will cause damage.
- Oxidation Is a reaction of acids in wood (e.g., tannic acid), with iron, oxygen, and moisture, whether this be relative humidity or direct moisture. Control of moisture is a simple way to protect wood products from stains as a result of oxidation.

43

- Abuse Use the trims, cabinets and fixtures, paneling, shelving, ornamental work, stairs, frames, windows, and doors as they were intended. Abuse of cabinet doors and drawers, for example, may result in damage to them as well as to the cabinet parts to which they are joined.
- CLEANING should be routine and accomplished with a soft, lint-free cloth lightly dampened with water or an inert household dust attractant. Allowing airborne dust, which is somewhat abrasive, to build up will tend to dull a finish over time.
  - Remove oil or grease deposits with a mild flax soap, following its directions for dilution.
  - Do not use abrasives, chemical or ammonia cleaners on fine architectural woodwork surfaces.
- Refinishing Contact a local Sponsor Association member/affiliate, to explore the options for repair or refinishing. It is often cost effective to replace damaged woodwork elements rather than attempting large scale, on site refinishing.

# RELATIVE HUMIDITY AND MOISTURE CONTENT

The space in which architectural woodwork is to be installed should be engineered with appropriate humidity controls to maintain its optimum relative humidity. Wood for architectural woodwork manufacturing use needs a moisture content within an optimum range. A major cause for failure in architectural woodwork is the lack of controls for maintaining a consistent, year round, appropriate relative humidity in a building or building space. Wood is susceptible to movement, shrinkage, expansion and warpage when exposed to air that has not been humidified. Without considerations made to properly regulate the relative humidity in any space containing architectural woodwork, some degree of failure of the woodwork can be expected.

Relative humidity outside the range shown on Table 2-001 below for the respective region is particularly harmful to wood and wood products.

This table is intended to establish a range in which architectural millwork can be properly stored, acclimatized, installed and maintained.

The most important effect of temperature is the effect it has on altering relative humidity levels See Table 2-002. Once a controlled humidity and temperature environment has been established the humidity shall be maintained without sudden changes, especially repetitive changes. It is suggested that daily/monthly range vary no more than 10 F (5.6 C) degrees and 15% relative humidity.

The table and map that follow (adapted from USDA's *The Wood Handbook* (latest edition), published by their Forest Products Laboratory, <u>http://fpl.fs.fed.us/index.php</u>) shows the Optimum Moisture Content and the Indoor Relative Humidity required to hold such moisture content within the general areas of the United States and Canada.

Some of these areas have additional micro-climates not shown or referenced

#### TABLE: 2-001 - RELATIVE HUMIDITY and OPTIMUM MOISTURE CONTENT

|   | Optimum Moi   | sture Content                     |   |
|---|---|-----------------------------------|---|
| Geographical Location   | Non-Climate Controlled<br>Interior or Exterior<br>Environment | Climate Controlled<br>Environment | Optimum Climate Controlled<br>Relative Humidity |
| Most of U.S. and Canada   | 9-15%   | 5-10%                             | 25-55%  |
| Damp Southern Coastal areas of the U.S. and Canadian Eastern<br>Coastal Provinces | 10-15%  | 8-13%                             | 43-70%  |
| Dry Southwestern U.S.   | 7-12%   | 4-9%                              | 20-50%  |
| Alberta, Saskatchewan, and Manitoba in Canada                                     | 10-15%  | 4-9%                              | 20-50%  |

#### **RECLAIMED OR RECYCLED WOOD**

Ambient humidity and initial moisture content of reclaimed wood can be very important factors in insuring dimensional stability of the end product.

 With reclaimed wood moisture content may need to be addressed on a case by case basis. Typically "barn wood" is supplied "dry" and is of little concern in this regard. On the other hand timbers encrusted in earth or reclaimed from moist environments exposed to rain and water may require further drying to ensure stability.

44

- Additional drying may be particularly important when secondary milling is required to create the final form. Wood that may appear to be dry may contain a reservoir of moisture at its core which could be activated by further milling. This could result in a product which checks, cracks and distorts in unacceptable ways.
- For some design purposes instability may be a desired result. In other words, initial high moisture content may cause lumber to twist and crack after installation over time in ways that achieve a particular aesthetic result. Achieving these effects is the responsibility of the design professional working in close collaboration with the architectural woodwork manufacturer.

#### TABLE: 2-002 - EQUILIBRIUM MOISTURE CONTENT VALUES AT VARIOUS TEMPERATURES AND HUMIDITIES

The following table indicates relative humidity must average between 25% and 55% to maintain wood moisture content between 5-10%. This range is best suited for most of the U.S. and Canada. While temperature has an impact on relative humidity, temperature alone has little effect on wood products if the relative humidity is maintained within recommended ranges.

#### **TO USE TABLE**

45

Obtain wet and dry bulb readings. Subtract wet bulb reading from dry bulb reading. Find dry bulb on left margin of table and follow across to the column where the value at the top corresponds with the difference between wet and dry readings. At point of intersection, the upper figure in the square gives relative humidity in percent and the lower figure gives equilibrium moisture content of the woodwork.

#### EXAMPLES OF MOISTURE EQUILIBRIUM TABLE USE

The above may be used as a guide in determining whether or not the conditions in a construction area are suitable for receiving woodwork. For example: if woodwork with an 8% average moisture content is to be installed and the average temperature in the building will be maintained at 70°F, it can be determined by following the 70°F column horizontally to the right until the lower moisture content figures of 8.3% and 7.7% are reached.

Here the upper figures in the same squares show that ideally a relative humidity of between 44% and 40% should be maintained in order to achieve dimensional equilibrium. After the woodwork is painted or finished, moisture changes in the wood are retarded so that maintenance of relative humidity between the practical limits shown on the curve (between 5%-10% m.c.) of the humidity table, i.e., 25%-55% relative humidity, is usually satisfactory.

**GENERAL**/PRODUCT

# compliance requirements

#### **INCLUDING:** Care and Moisture Considerations Before, During, and After Installation

#### 2.1 **BASIC CONSIDERATIONS**

| 1   | GRADES - None   |
|-----|---|
| 1.1 | Care and storage requirements are the same for all<br>architectural woodwork projects, regardless of Grade specified<br>or required.  |
| 2   | DIMENSIONAL CHANGE RESPONSIBILITY in wood products resulting from:  |
| 2.1 | IMPROPER DESIGN rests with the design professional.   |
| 2.2 | IMPROPER RELATIVE HUMIDITY EXPOSURE<br>during site storage and installation rests with the contractor.  |
| 2.3 | HUMIDITY EXTREMES after occupancy rests with the owner.   |
| 3   | INDUSTRY PRACTICES  |
| 3.1 | OFF GAS REDUCTION by raising the temperature<br>in a building for a sustained period is unacceptable<br>and will negatively affect the appearance and<br>performance of architectural millwork. |
| ~   |   |

Open joints, warped paneling/doors, and other defects 3.1.1 caused by such are not to be considered a defect.

GENERAL/PRODUCT/INSTALLATION/TEST

#### 6.5 **PREPARATION** and **QUALIFICATION** REQUIREMENTS

- 1 CARE, STORAGE, and BUILDING CONDITIONS shall be in compliance with the requirements set forth in Section 2 of these standards.
- 1.1 Severe damage to the woodwork can result from noncompliance. The manufacturer and/or installer of the woodwork shall not be held responsible for damage that might develop by not adhering to the requirements.

#### 2 **CONTRACTOR IS RESPONSIBLE FOR**

- 2.1 Furnishing and installing structural members, grounds, in wall blocking, backing, furring, brackets, or other anchorage required for architectural woodwork installation that becomes an integral part of walls, floors, or ceilings to which architectural woodwork, such as wall applied surfacing, standing and running trim, wall mounted shelf standards and door/window frames shall be installed.
- 2.1.1 In the absence of contract documents calling for the contractor to supply the necessary in wall blocking/backing in the wall or ceilings, either through inadvertence or otherwise, the architectural woodwork installer shall not proceed with the installation until such time as the in wall blocking/backing is installed by others.
- 2.1.2 Preparatory work done by others shall be subject to inspection by the architectural woodwork installer and may be accepted or rejected for cause prior to installation.
- 2.1.2.1 WALL, CEILING, and/or opening variations in excess of 1/4" (6.4 mm) or FLOORS in excess of 1/2" (12.7 mm) in 144" (3658 mm) of being plumb, level, flat, straight, square, or of the correct size are not acceptable for the installation of architectural woodwork, nor is it the responsibility of the installer to scribe or fit to tolerances in excess of such.
- 2.1.3 Installation site being properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.

Where the E, C, or P icon is not indicated,

the rule applies to all Grades equally

# compliance requirements

| 0.0   | PREPARATION and QUALIFICATION (continued)   |
|-------|---|
| 2.2   | Priming the architectural woodwork in accordance with the<br>contract documents prior to its installation:  |
| 2.2.1 | If the architectural woodwork is factory finished, priming by the factory finisher is required.   |
| 3     | INSTALLER IS RESPONSIBLE FOR  |
| 3.1   | Having adequate equipment and experienced craftsmen to complete the installation in a first class manner.   |
| 3.2   | Checking architectural woodwork specified and studying the<br>appropriate portions of the contract documents, including<br>these standards and the reviewed shop drawings to<br>familiarize themselves with the requirements of the Grade<br>specified, understanding that: |
| 3.2.1 | Appearance requirements of Grades apply only to surfaces<br>visible after installation.   |
| 3.2.2 | For transparent finish, special attention needs to be given<br>to the color and the grain of the various woodwork pieces<br>to ensure they are installed in compliance with the Grade<br>specified.   |
| 3.3   | Verification that installation site is properly ventilated,<br>protected from direct sunlight, excessive heat and/or moisture,<br>and that the HVAC system is functioning and maintaining the<br>appropriate relative humidity and temperature.                             |
| 3.4   | Verification that required priming of woodwork has been<br>completed by others before woodwork is installed.  |
| 3.5   | Verification that woodwork has been acclimated to the field conditions for a minimum of 72 hours before installation is commenced.  |
| 3.6   | Woodwork specifically built or assembled in sequence for<br>match of color and grain is installed to maintain that same   |

GENERAL/PRODUCT/INSTALLATION/TEST

#### **PREPARATION** and **QUALIFICATION** 7.5

**REQUIREMENTS** (unless otherwise specified)

- 1 CARE, STORAGE, and BUILDING CONDITIONS shall be in compliance with the requirements set forth in Section 2 of these standards.
- 1.1 Severe damage to the woodwork can result from noncompliance. The manufacturer and/or installer of the woodwork shall not be held responsible for any damage that might develop by not adhering to the requirements.

#### 2 **CONTRACTOR IS RESPONSIBLE FOR:**

- 2.1 Furnishing and installing structural members, grounds, in wall blocking, backing, furring, brackets, or other anchorage required for architectural woodwork installation that becomes an integral part of walls, floors, or ceilings to which architectural woodwork shall be installed.
- 2.1.1 In the absence of contract documents calling for the contractor to supply the necessary in wall blocking/backing in the wall or ceilings, either through inadvertence or otherwise, the architectural woodwork installer shall not proceed with the installation until such time as the in wall blocking/backing is installed by others.
- 2.1.2 Preparatory work done by others shall be subject to inspection by the architectural woodwork installer, and shall be accepted or rejected for cause prior to installation.
- WALL, CEILING, and/or OPENING VARIATIONS 2.1.2.1 in excess of 1/4" (6.4 mm) or FLOORS in excess of 1/2" (12.7 mm) in 144" (3658 mm) of being plumb, level, flat, straight, square, or of the correct size are not acceptable for the installation of architectural woodwork, nor is it the responsibility of the installer to scribe or fit to tolerances in excess of such.
- 2.2 Installation site being properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.

### the rule applies to all Grades equally

# compliance requirements

| 7.5   | PREPARATION and QUALIFICATION (continued)   |
|-------|---|
| 2.3   | Priming the architectural woodwork in accordance with the contract documents prior to its installation, and:  |
| 2.3.1 | If the architectural woodwork is factory finished, priming by the factory finisher is required.   |
| 3     | INSTALLER IS RESPONSIBLE FOR:   |
| 3.1   | Having adequate equipment and experienced craftsmen to complete the installation in a first class manner.   |
| 3.2   | Checking architectural woodwork specified and studying the<br>appropriate portions of the contract documents, including<br>these standards and the reviewed shop drawings to<br>familiarize themselves with the requirements of the Grade<br>specified, understanding that: |
| 3.2.1 | Appearance requirements of Grades apply only to surfaces visible after installation.  |
| 3.2.2 | For transparent finish, special attention needs to be given<br>to the color and the grain of the various woodwork pieces<br>to ensure they are installed in compliance with the Grade<br>specified.   |
| 3.3   | Verification that installation site is properly ventilated,<br>protected from direct sunlight, excessive heat and/or moisture,<br>and that the HVAC system is functioning and maintaining the<br>appropriate relative humidity and temperature.                             |
| 3.4   | Verification that required priming of woodwork has been<br>completed by others before woodwork is installed.  |

- 3.5 Verification that woodwork has been acclimated to the field conditions for a minimum of 72 hours before installation is commenced.
- 3.6 Woodwork specifically built or assembled in sequence for match of color and grain is installed to maintain that same sequence.

### GENERAL/PRODUCT/INSTALLATION/TEST

#### 7.6 RULES

1

- 1 The following rules shall govern unless a project's contract documents require otherwise.
- 2 These rules are intended to provide a well defined degree of control over a project's quality of installation.
- 3 ERRATA, published at <u>http://naaws-errata.com</u>, shall take precedence over these rules, subject to their date of posting and a project's bid date.

### 7.6.4 Basic General Rules

**AESTHETIC** Grade rules apply only to exposed and semi-exposed surfaces visible after installation.

| 2 | TRANSPARENT finished woodwork shall be installed with:  |  |   |       |    |   |  |  |  |  |  |  |  |

### SECTION 8 Wall/Ceiling Surfacing and Partitions

Where the E, C, or P icon is not indicated, the rule applies to all Grades equally

#### GENERAL/PRODUCT/INSTALLATION/TEST

#### 8.5 **PREPARATION** and **QUALIFICATION** REQUIREMENTS

- 1 CARE, STORAGE, and BUILDING CONDITIONS shall be in compliance with the requirements set forth in Section 2 of these standards.
- 1.1 Severe damage to the woodwork can result from noncompliance. THE MANUFACTURER AND/OR INSTALLER OF THE WOODWORK SHALL NOT BE HELD **RESPONSIBLE FOR DAMAGE THAT MIGHT DEVELOP BY** NOT ADHERING TO THE REQUIREMENTS.

#### 2 **CONTRACTOR IS RESPONSIBLE FOR**

- 2.1 Furnishing and installing structural members, grounds, in wall blocking, backing, furring, brackets, or other anchorage required for architectural woodwork installation that becomes an integral part of walls, floors, or ceilings to which architectural woodwork shall be installed.
- 2.1.1 In the absence of contract documents calling for the contractor to supply the necessary in wall blocking/backing in the wall or ceilings, either through inadvertence or otherwise, the architectural woodwork installer shall not proceed with the installation until such time as the in wall blocking/backing is installed by others.
- 2.1.2 Preparatory work done by others shall be subject to inspection by the architectural woodwork installer and shall be accepted or rejected for cause prior to installation.
- 2.1.2.1 WALL, CEILING, and/or OPENING VARIATIONS in excess of 1/4" (6.4 mm) or FLOORS in excess of 1/2" (12.7 mm) in 144" (3658 mm) of being plumb, level, flat, straight, square, or of the correct size are not acceptable for the installation of architectural woodwork, nor is it the responsibility of the installer to scribe or fit to tolerances in excess of such.
- 2.2 Installation site being properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.

# compliance requirements

#### 8.5 **PREPARATION** and **QUALIFICATION REQUIREMENTS** (continued)

- 2.3 Priming the architectural woodwork in accordance with the contract documents prior to its installation, and: 2.3.1 Building wall surfaces shall be primed where construction adhesive is used for panelling installation.
- 2.4 If the architectural woodwork is factory finished, priming by the factory finisher is required.

#### 3 **INSTALLER IS RESPONSIBLE FOR**

- 3.1 Having adequate equipment and experienced craftsmen to complete the installation in a first class manner.
- Checking architectural woodwork specified and studying the 3.2 appropriate portions of the contract documents, including these standards and the reviewed shop drawings to familiarize themselves with the requirements of the Grade specified, understanding that:
- 3.2.1 Appearance requirements of Grades apply only to surfaces visible after installation.
- 3.2.2 For transparent finish, special attention needs to be given to the color and the grain of the various woodwork pieces to ensure they are installed in compliance with the Grade specified.
- 3.3 Verification that installation site is properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.
- 3.4 Verification that required priming of woodwork has been completed by others before woodwork is installed.
- 3.5 Verification that woodwork has been acclimated to the field conditions for a minimum of 72 hours before installation is commenced.
- 3.6 Woodwork specifically built or assembled in sequence for match of color and grain is installed to maintain that same sequence.

North American Architectural Woodwork Standards - 3.1

250 Effective July 1, 2017 - Including ERRATA through July 17, 2017

Wall/Ceiling Surfacing and Partitions

GENERAL/PRODUCT/INSTALLATION/TEST

#### 8.6 RULES

1

- 1 The following rules shall govern unless a project's contract documents require otherwise.
- 2 These rules are intended to provide a well defined degree of control over a project's quality of installation.
- 3 ERRATA, published at <u>http://naaws-errata.com</u>, shall take precedence over these rules, subject to their date of posting and a project's bid date.

# ate

### 8.6.1 Basic General Rules

**AESTHETIC** grade rules apply only to exposed and semi-exposed surfaces visible after installation.

Doors

#### GENERAL/PRODUCT/INSTALLATION/TEST

#### 9.5 PREPARATION and QUALIFICATION REQUIREMENTS

- 1 **CARE, STORAGE, and BUILDING CONDITIONS** shall be in compliance with the requirements set forth in Section 2 of these standards,and doors shall be:
- 1.1 Sealed at earliest possible moment. Edge sealing is particularly important.
- 1.2 Lift or carry door. Do not drag one door against another.
- 1.3 Handle doors with clean hands or clean gloves.
- 1.4 Severe damage to the woodwork can result from noncompliance. The manufacturer and/or installer of the woodwork shall not be held responsible for damage that might develop by not adhering to the requirements.

#### 2 CONTRACTOR IS RESPONSIBLE FOR

- 2.1 Furnishing and installing structural members, grounds, in wall blocking, backing, furring, brackets, or other anchorage required for architectural woodwork installation that becomes an integral part of walls, floors, or ceilings to which architectural woodwork shall be installed.
- 2.1.1 In the absence of contract documents calling for the contractor to supply the necessary in wall blocking/backing in the wall or ceilings, either through inadvertence or otherwise, the architectural woodwork installer shall not proceed with the installation until such time as the in wall blocking/backing is installed by others.
- 2.1.2 Preparatory work done by others shall be subject to inspection by the architectural woodwork installer, and may be accepted or rejected for cause prior to installation.
- 2.1.2.1 WALL, CEILING, and/or OPENING VARIATIONs in excess of 1/4" (6.4 mm) or FLOORS in excess of 1/2" (12.7 mm) in 144" (3658 mm) of being plumb, level, flat, straight, square, or of the correct size are not acceptable for the installation of architectural woodwork, nor is it the responsibility of the installer to scribe or fit to tolerances in excess of such.

the rule applies to all Grades equally

CP

# 9.5 PREPARATION and QUALIFICATION REQUIREMENTS (continued)

| 2.1.3 | Installation site being properly ventilated, protected from<br>direct sunlight, excessive heat and/or moisture, and that<br>the HVAC system is functioning and maintaining the<br>appropriate relative humidity and temperature.  |
|-------|---|
| 2.2   | Priming the architectural woodwork in accordance with the contract documents prior to its installation.   |
| 3     | INSTALLER IS RESPONSIBLE FOR  |
| 3.1   | Having adequate equipment and experienced craftsmen to complete the installation in a first class manner.   |
| 3.2   | Checking architectural woodwork specified and studying the<br>appropriate portions of the contract documents, including<br>these standards and the reviewed shop drawings to<br>familiarize themselves with the requirements of the Grade<br>specified, understanding that: |
| 3.2.1 | Appearance requirements of Grades apply only to surfaces<br>visible after installation.   |
| 3.2.2 | For transparent finish, special attention needs to be given<br>to the color and the grain of the various woodwork pieces<br>to ensure they are installed in compliance with the Grade<br>specified.   |
| 3.3   | Verification that installation site is properly ventilated,<br>protected from direct sunlight, excessive heat and/or moisture,<br>and that the HVAC system is functioning and maintaining the<br>appropriate relative humidity and temperature.                             |
| 3.4   | Verification that required priming of woodwork has been<br>completed by others before woodwork is installed.  |

- 3.5 Verification that woodwork has been acclimated to the field conditions for a minimum of 72 hours before installation is commenced.
- 3.6 Woodwork specifically built or assembled in sequence for match of color and grain is installed to maintain that same sequence.

### GENERAL/PRODUCT/INSTALLATION/TEST

#### 9.6 RULES

1

8

- 1 The following rules shall govern unless a project's contract documents require otherwise.
- 2 These rules are intended to provide a well defined degree of control over a project's quality of materials, workmanship, or installation.
- 3 ERRATA, published at <u>naaws-errata.com</u>, shall take precedence over these rules, subject to their date of posting and a project's bid date.

# 1

### 9.6.4 Basic General Rules

**AESTHETIC** Grade rules apply only to exposed and semi-exposed surfaces visible after installation.

2 **INSTALLERS** shall be furnished with an approved:

2 1 Hardware schedule and required templates.

2 2 Set of metal frame shop drawings, including the locations of the hardware preparations.

3 PRE-FIT and PRE-MACHINED doors are to be installed in accordance with the manufacturer's data.

4 **TRANSPARENT FINISH** doors in sets or with transoms shall be installed:

41Compatible in color and grain.CP42Well matched for color and grain.CP

5 BLUEPRINT matched doors and panels shall be single sourced.

**UTILITY** or **STRUCTURAL STRENGTH** of doors shall not be impaired
 in fitting them to the opening, applying hardware, preparing for lights, louvers, plant-ons, or other detailing.

FIRE DOOR ASSEMBLIES, including 20, 30, 45, 60, and 90 minute rated, shall be prepared for locks, latches, hinges, remotely operated
 or monitored hardware, concealed closers, glass lights, vision panels,

louvers, astragals, and laminated overlays in conformance to the manufacturer's Label Service requirements, and:

7 1 LABELS are prohibited from being removed.

**DOORS** and their **ACCESSORIES** shall be hung plumb and level within 1/16" (1.6 mm) of the height and width of the door assembly.

# GENERAL/PRODUCT/INSTALLATION/TEST

#### 10.5 PREPARATION and QUALIFICATION REQUIREMENTS

- 1 **CARE, STORAGE,** and **BUILDING CONDITIONS** shall be in compliance with the requirements set forth in Section 2 of these standards.
- 1.1 Severe damage to the woodwork can result from noncompliance. The manufacturer and/or installer of the woodwork shall not be held responsible for damage that might develop by not adhering to the requirements.

#### 2 CONTRACTOR IS RESPONSIBLE FOR

- 2.1 Furnishing and installing structural members, grounds, in wall blocking, backing, furring, brackets, or other anchorage required for architectural woodwork installation that becomes an integral part of walls, floors, or ceilings to which architectural woodwork shall be installed.
- 2.1.1 In the absence of contract documents calling for the contractor to supply the necessary in wall blocking/backing in the wall or ceilings, either through inadvertence or otherwise, the architectural woodwork installer shall not proceed with the installation until such time as the in wall blocking/backing is installed by others.
- 2.1.2 Preparatory work done by others shall be subject to inspection by the architectural woodwork installer and may be accepted or rejected for cause prior to installation.
- 2.1.2.1 WALL, CEILING, and/or opening variations in excess of 1/4" (6.4 mm) or FLOORS in excess of 1/2" (12.7 mm) in 144" (3658 mm) of being plumb, level, flat, straight, square, or of the correct size are not acceptable for the installation of architectural woodwork, nor is it the responsibility of the installer to scribe or fit to tolerances in excess of such.
- 2.2 Installation site being properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.
- 2.3 Priming architectural woodwork in accordance with the contract documents prior to its installation:
- 2.3.1 If the architectural woodwork is factory finished, priming by the factory finisher is required.

#### Where the **E**, **C**, or **P** icon is not indicated, the rule applies to all Grades equally

# compliance requirements

#### 10.5 PREPARATION and QUALIFICATION (continued)

3 INSTALLER IS RESPONSIBLE FOR

- 3.1 Having adequate equipment and experienced craftsmen to complete the installation.
- 3.2 Checking architectural woodwork specified and studying the appropriate portions of the contract documents, including these standards and the reviewed shop drawings to familiarize themselves with the requirements of the Grade specified, understanding that:
- 3.2.1 Appearance requirements of Grades apply only to surfaces visible after installation.
- 3.2.2 For transparent finish, special attention needs to be given to the color and the grain of the various woodwork pieces to ensure they are installed in compliance with the Grade specified.
- 3.3 Verification that installation site is properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.
- 3.4 Verification that required priming of woodwork has been completed by others before woodwork is installed.
- 3.5 Verification that woodwork has been acclimated to the field conditions for a minimum of 72 hours before installation is commenced.
- 3.6 Woodwork specifically built or assembled in sequence for match of color and grain is installed to maintain that same sequence.

the rule applies to all Grades equally

#### 10.6 **RULES**

- 1 The following rules shall govern unless a project's contract documents require otherwise.
- 2 These rules are intended to provide a well defined degree of control over a project's quality of installation.
- 3 ERRATA, published at <u>http://naaws-errata.com</u>, shall take precedence over these rules, subject to their date of posting and a project's bid date.

### **10.6.4** Basic General Rules

1 AESTHETIC grade rules apply only to exposed and semi-exposed surfaces visible after installation.

| 2 | Fo  | or TRANSPARENT finish, woodwork shall be installed:  |        |              |           |  |  |  |  |  |  |

# SECTION 10 - ANNEX 10E

Seismic Casework Installation

Where the **E**, **C**, or **P** icon is not indicated, the rule applies to all Grades equally

GENERAL/PRODUCT/INSTALLATION/TEST

# compliance requirements

# Additional Requirements for Seismic Casework Installation

Requires explicit specification requirement for such within contract documents.

#### 10.5.E ADDITIONAL PREPARATION REQUIREMENTS Applicable for all Grades

**CAUTION** - It is the users responsibility to confirm compatibility, acceptability and scope of these seismic engineered installation standards. The Sponsor Associations shall not be responsible to anyone for the use of or reliance upon these standards, nor shall they incur any obligation nor liability for damages, including consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon these standards.

- 1 These engineered seismic casework installation standards are based on 2010 and 2013 California Building Code (CBC) requirements for use in California (approved by the California Office of Statewide Health Planning and Development (OSHPD) and accepted by California Division of State Architecture (DSA)); however, may also be adequate for use in other areas that base their requirements on the International Building Code (IBC). This engineering is applicable for the installation of casework in building structures:
- 1.1 At any height within the building where z/h <= 1.0
- 1.2 Where the SDS is not greater than:
- 1.2.1 1.93 for base, peninsula and mechanical chase cabinets
- 1.2.2 2.0 for wall and tall storage cabinets, and includes:
- 1.3 At concrete or concrete masonry unit (CMU) wall construction when grouted solid.
- 1.4 At wood or metal stud wall construction with either continuous 3 x 6 (76 x 152 mm) or 16 gauge in wall blocking respectively, with:
- 1.4.1 One or two layers of 5/8" (16 mm) sheetrock.

| 10 5 E |  |
|--------|--|
| 10.J.L | Applicable for all Grades  |
| 1.5    | Where Casework construction is of plywood, particleboard,<br>MDF or Solid Phenolic Core (SPC) and in compliance with the<br>minimum requirements of the North American Architectural<br>Woodwork Standards (NAAWS), including:   |
| 1.5.1  | Base cabinets, up to 36" (914 mm) tall x 24" (610 mm) body depth x 48" (1220 mm) wide, including peninsula and those with mechanical chase   |
| 1.5.2  | Wall cabinets up to 48" (1220 mm) tall x 18" (457 mm) body depth x 48" (1220 mm) wide  |
| 1.5.3  | Tall storage cabinets up to 96" (2413 mm) tall x 24" (610 mm) body depth x 48" (1220 mm) wide  |
| 1.5.4  | Peninsula base cabinets up to 36" (914 mm) tall x 36" (914 mm) body depth x 48" (1220 mm) wide   |
| 1.5.5  | Mechanical chase base cabinets up to 42" (1067 mm) tall x 36" (914 mm) body depth and 48" (1220 mm) wide   |
| 2      | CONTRACTOR IS RESPONSIBLE FOR:   |
| 2.1    | FURNISHING and INSTALLING in wall blocking and backing anchorage required for seismic casework installation, in accordance with these standards, that becomes an integral part of the walls to which architectural woodwork shall be installed.  |
| 2.1.1  | In the absence of contract documents calling for the contractor to supply the necessary in wall blocking/backing in the wall, either through inadvertence or otherwise, the architectural woodwork installer shall not proceed with the installation until such time as the in wall blocking/backing is installed by others. |

2.1.2 In wall blocking/backing is installed by others shall be subject to inspection by the architectural woodwork installer and may be accepted or rejected for cause prior to installation.

## SECTION 11 Countertops

### GENERAL/PRODUCT/INSTALLATION/TEST

#### 11.5 PREPARATION AND QUALIFICATION REQUIREMENTS

- 1. CARE, STORAGE, and BUILDING CONDITIONS shall be in compliance with the requirements set forth in Section 2 of these standards.
- 1.1 Severe damage to the woodwork can result from noncompliance. THE MANUFACTURER AND/OR INSTALLER OF THE WOODWORK SHALL NOT BE HELD RESPONSIBLE FOR DAMAGE THAT MIGHT DEVELOP BY NOT ADHERING TO THE REQUIREMENTS.

#### 2 CONTRACTOR IS RESPONSIBLE FOR

3

- 2.1 Furnishing and installing structural members, grounds, in wall blocking, backing, furring, brackets, or other anchorage required for architectural woodwork installation that becomes an integral part of walls, floors, or ceilings to which architectural woodwork shall be installed.
- 2.1.1 In the absence of contract documents calling for the contractor to supply the necessary in wall blocking/backing in the wall or ceilings, either through inadvertence or otherwise, the architectural woodwork installer shall not proceed with the installation until such time as the in wall blocking/backing is installed by others.
- 2.1.2 Preparatory work done by others shall be subject to inspection by the architectural woodwork installer and may be accepted or rejected for cause prior to installation.
- 2121 WALL, CEILING, and/or opening variations in excess of 1/4" (6.4 mm) or FLOORS in excess of 1/2" (12.7 mm) in 144" (3658 mm) of being plumb, level, flat, straight, square, or of the correct size are not acceptable for the installation of architectural woodwork, nor is it the responsibility of the installer to scribe or fit to tolerances in excess of such.
- 2.2 Installation site being properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.

# compliance requirements

#### **11.5 PREPARATION AND QUALIFICATION REQUIREMENTS** (continued)

2.3 Priming the architectural woodwork in accordance with the contract documents prior to its installation. 2.3.1 If the architectural woodwork is factory finished, priming by the factory finisher is required.

#### **INSTALLER IS RESPONSIBLE FOR**

- 3.1 Having adequate equipment and experienced craftsmen to complete the installation in a first class manner.
- 3.2 Checking architectural woodwork specified and studying the appropriate portions of the contract documents, including these standards and the reviewed shop drawings to familiarize themselves with the requirements of the Grade specified, understanding that:
- 3.2.1 Appearance requirements of Grades apply only to surfaces visible after installation.
- 3.2.2 For transparent finish, special attention needs to be given to the color and the grain of the various woodwork pieces to ensure they are installed in compliance with the Grade specified.
- 3.3 Verification that installation site is properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.
- 3.4 Verification that required priming of woodwork has been completed by others before woodwork is install.
- 3.5 Verification that woodwork has been acclimated to the field conditions for a minimum of 72 hours before installation is commenced.
- 3.6 Woodwork specifically built or assembled in sequence for match of color and grain is installed to maintain that same

#### sequence.

#### 11.6 **RULES**

- 1 The following rules shall govern unless a project's contract documents require otherwise.
- 2 These rules are intended to provide a well defined degree of control over a project's quality of installation.
- 3 ERRATA, published at http://naaws-errata.com, shall take precedence over these rules, subject to their date of posting and a project's bid date.

#### 11.6.4 **Basic General Rules** AESTHETIC GRADE RULES apply only to exposed surfaces visible 1

### GENERAL/PRODUCT/INSTALLATION

#### 12.5 PREPARATION AND QUALIFICATION REQUIREMENTS

- 1 **CARE, STORAGE, and BUILDING CONDITIONS** shall be in compliance with the requirements set forth in Section 2 of these standards.
- 1.1 Severe damage to the woodwork can result from noncompliance. The manufacturer and/or installer of the woodwork shall not be held responsible for damage that might develop by not adhering to the requirements.

#### 2 CONTRACTOR IS RESPONSIBLE FOR

- 2.1 Furnishing and installing structural members, grounds, in wall or ceiling blocking, backing, furring, brackets, or other anchorage required for architectural woodwork installation that becomes an integral part of walls, floors, or ceilings to which architectural woodwork shall be installed.
- 2.1.1 In the absence of contract documents calling for the contractor to supply the necessary blocking/backing in the wall or ceilings, either through inadvertence or otherwise, the architectural woodwork installer shall not proceed with the installation until such time as the in wall or ceiling blocking/backing is installed by others.
- 2.1.2 Preparatory work done by others shall be subject to inspection by the architectural woodwork installer and may be accepted or rejected for cause prior to installation.
- 2.1.2.1 **WALL, CEILING**, and/or opening variations in excess of 1/4" (6.4 mm) or **FLOORS** in excess of 1/2" (12.7 mm) in 144" (3658 mm) of being plumb, level, flat, straight, square, or of the correct size are not acceptable for the installation of architectural woodwork, nor is it the responsibility of the installer to scribe or fit to tolerances in excess of such.

# compliance requirements

# 12.5 PREPARATION AND QUALIFICATION REQUIREMENTS (continued)

- 2.2 Installation site being properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.
- 2.3 Priming the architectural woodwork in accordance with the contract documents prior to its installation.
- 2.3.1 If the architectural woodwork is factory finished, priming by the factory finisher is required.

#### 3 INSTALLER IS RESPONSIBLE FOR

- 3.1 Having adequate equipment and experienced craftsmen to complete the installation in a first class manner.
- 3.2 Checking all architectural woodwork specified and studying the appropriate portions of the contract documents, including these standards and the reviewed shop drawings, to familiarize themselves with the requirements of the Grade specified, understanding that:
- 3.2.1 For transparent finish, special attention needs to be given to the color and grain of the various woodwork pieces to ensure they are installed in compliance to match existing.
- 3.2.2 Installation site is properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.
- 3.3 Verification that installation site is properly ventilated, protected from direct sunlight, excessive heat and/or moisture, and that the HVAC system is functioning and maintaining the appropriate relative humidity and temperature.
- 3.4 Verification that required priming of woodwork has been completed by others before woodwork is installed.
- 3.5 Verification that woodwork has been acclimated to the field conditions for a minimum of 72 hours before installation is commenced.
- 3.6 Woodwork specifically built or assembled in sequence for match of color and grain is installed to maintain that same sequence.

### GENERAL/PRODUCT/INSTALLATION

#### 12.6 RULES

- 1 The following rules shall govern unless a project's contract documents require otherwise.
- 2 These rules are intended to provide a well defined degree of control over a project's quality of materials, workmanship, or installation.
- 3 ERRATA, published at <u>http://-errata.com</u>, shall take precedence over these rules, subject to their date of posting and a project's bid date.

# 12.6.4Basic General Rules

**AESTHETIC** grade rules apply only to exposed and semi-exposed surfaces visible after installation.

| 2 | M  | MATCH of EXISTING installation methods is required, in: |  |  |  |  |  |  |
|---|--|---|--|--|--|--|--|--|
| 2 | 1  | Compliance with Sections 3 - 11, as applicable.         |  |  |  |  |  |  |
|   |  |   |  |  |  |  |  |  |
| 3 | Where new materials are required to be distressed to blend seamlessly with original, mock-ups shall be approved by the design professional or conservator before proceeding. |   |  |  |  |  |  |  |
|   |  |   |  |  |  |  |  |  |
| 4 | GROUNDS, BUCKS, or HANGING SYSTEMS shall be installed plumb and true.  |   |  |  |  |  |  |  |
|   |  |   |  |  |  |  |  |  |
| 5 | TI   | RA  | NSPARENT finished woodwork shall be installed:                     |  |  |  |  |  |
| 5 | 1  | W   | /ell matched for color and grain.                                  |  |  |  |  |  |
| 5 | 1  | 1   | Sheet products shall be compatible in color with solid stock.      |  |  |  |  |  |
| 5 | 1  | 2   | Adjacent sheet products shall be well matched for color and grain. |  |  |  |  |  |
| 5 | Installer shall pay special attention to the color and the grain of the various trim pieces to ensure they are installed in compliance with Premium Grade                    |   |  |  |  |  |  |  |

**6 REPAIRS** are allowed, provided they are neatly made and inconspicuous when viewed at 24" (610 mm).
